2026 Subject Index

Title	Page
An imitation enhanced actor–critic approach for maze navigation	64
An integrated deep learning approach for 3D urban scene generation using monocular satellite imagery	56
Android application for multilingual hate speech detection: using XLM-RoBERTa and ONNX optimized	72
Application and performance evaluation of the dynamic bit-level encoding algorithm (DEA) in text compression: a cross-domain perspective	1
Binary text classification using machine learning and transformer models for small and imbalanced datasets	83
Detection of Alzheimer's disease from magnetic resonance images with deep learning	34
Development of a personalized cardio exercise and diet tracking mobile application: CardioFit IOS	9
Explainable AI-driven IoT botnet detection for 6G networks	46
Explainable brain tumor classification using an attention-augmented CNN and Grad-CAM	77
Intelligent diagnosis of tomato leaf diseases using YOLOv8	27
Investigation of fine-tuned BERT models for sentiment analysis in COVID-19 tweets using a fuzzy logic-based ensemble approach	17
