

## 2023 Subject Index

Title	Page
Classification of heart disease dataset with k-NN optimized by pso and gwo algorithms	41
Controlling the operation of the dc motor by using pid with metaheuristic technology	34
Convolutional neural network for pothole detection in different road and weather conditions	1
Cryptocurrency analysis using machine learning and deep learning approaches	29
Faculty network system implementation using cisco packet tracer	20
Investigation of financial applications with blockchain technology	10
Machine learning methods on quantized vectors	46
Personalized daily-weekly workout arrangement application "cardio fit"	25
Power system fault detection and notification with Wi-Fi	15
Prediction of heart attack risk using linear discriminant analysis methods	5
